CHALLENGE. EVERY DAY.

CHALLENGE. EVERY DAY.

the heritage

75 YEARS

CRAFTSMEN IN THE SMALL TOWN OF ŽIRI IN SLOVENIA HAVE BEEN MAKING FOOTWEAR SINCE THE MIDDLE OF THE NINETEENTH CENTURY AND IN THE YEAR 1952 ALPINA FACTORY WAS BORN. A LOT HAS CHANGED SINCE THE GOOD OLD DAYS, BUT THIS DEDICATION TO CRAFTSMANSHIP AND HANDIWORK HAS REMAINED PRACTICALLY THE SAME. AFTER 75 YEARS, WE'RE STILL KEEPING THE TRADITION WHILE INCORPORATING MODERNIZATION AND NEW INNOVATIONS. CONFIRMATION THAT OUR WORK IS RESPECTABLE AND VALIDATED BY THE COUNTLESS SUCCESSES OF OUR ATHLETES AS WELL AS SATISFIED CUSTOMERS. FROM THE FIRST SLOVENIAN ALPINE EXPEDITION THAT CONQUERED THE TOP OF THE WORLD – MOUNT EVEREST IN 1979 TO THE FACT, THAT ALPINA IS GLOBALLY KNOWN AS BEING THE FIRST CHOICE OF OLYMPIC AND WORLD CUP WINNERS IN CROSS-COUNTRY SKIING RACES, WE APPROACH EVERY DAY AS A CHALLENGE AND CAN PROUDLY SAY THAT WE'LL KEEP STRIVING TO GET BETTER WITH THE SAME PASSION AND COMMITMENT FOR THE NEXT 75 YEARS.

THANKS FOR CHALLENGING US EVERY DAY!

CHALLENGE. EVERY DAY.

the innovation

The perfect package

Refreshed backcountry experience with our lightweight, nimble and responsive BC boots in the combination with an innovative pair of Pioneer skis and poles. The perfect package for winter joys!

alpinasports.com

FOR SKIING ONLY

This boot was designed to be the ultimate XC racing ski boot. • The boot is designed for maximum skiing performance. • We use carbon parts, which have been shaped to create the perfect balance between performance and fit. • Carbon adds stiffness and support where it's most needed, and is extremely lightweight – but needs special care, particularly when not out on the trails.

WHEN NOT ON THE TRAIL, ALWAYS USE OVERSHOES

Always use the boots together with the overshoes when not skiing. • Direct contact with concrete, asphalt, ice, sand, rock, stairs and any sharp objects can damage, even break the carbon outsole.

DO NOT BEND OR TWIST THE BOOT BY HAND

Never bend or twist the boots by hand. • Extreme bending or twisting of an empty boot (as shown in the figure) can result in damage, even breakage of the carbon elements. • Always put the boot on to get a feel for its remarkable flex characteristics.

DO NOT KNOCK THE BOOTS TOGETHER

Before stepping into the ski binding, clean the carbon sole carefully, by hand. • Similarly, clean the snow and dirt from the sole cleats by hand or with a ski pole. • Do not tap or knock the boots against each other or any other hard or sharp surfaces.

TRANSPORT BOOTS WITH CARE

During transport, always make sure not to place heavy bags or other heavy objects on top of the boots. • This could damage the carbon cuff or the carbon outsole.

HELPFUL HINTS FOR PROPER USE AND CARE

TREAT YOUR BOOTS WITH CARE

Clean boots with a soft, moist cloth or soft brush and water. • Never use chemical cleaning agents nor wash in a machine.

FOR LONGER PRODUCT LIFE

Boots should be cleaned on a regular basis. • Boots should be dried after each use to prevent the build-up of odours.

DRYING THE BOOTS

Dry at room temperature, without the aid of an external heat source. • Stuff boots with old newsprint; place at a safe distance from a mild source of heat – never in direct contact with any heat source; remove wet newsprint and repeat.

CHASSIS

ONE-PIECE CHASSIS

CLASSIC ACTIVE EDGE WITH ALPINA SSR CLASSIC SOLE

Extremely light anatomic and ergonomic carbon-made Active Edge & soft flex chassis construction with directly integrated TPU-made NNN compatible toe & heel plate. One-piece chassis construction provides maximum longitudinal stiffness and stability, superior responsiveness and power transmission by the foot to the ski, with free heel & adaptable heel pocket construction for minimum heel stress and optimal fit.

SKATE ACTIVE EDGE WITH ALPINA SSR SKATE SOLE

Extremely light anatomic and ergonomic carbon-made Active Edge & hard flex single-piece chassis construction with integrated TPU-made NNN compatible toe & heel plate. Chassis provides maximum longitudinal stiffness and lateral stability, superior responsiveness and power transmission by the foot to the ski, with adaptable heel pocket for optimal foot and ankle fit.

HEEL COUNTERS

FULL CARBON ACTIVE EDGE

Extremely light. Improves the torsional stability of the boot and provides excellent grip and foothold in the heel. With its Active Edge construction adopts to various types of heel and heel shapes.

CARBON + TPU

Carbon stabilizer provides torsional and heel counter stability inside and out; in combination with TPU adapts to various types of heel shape. All combine to deliver excellent grip and foothold.

INJECTED CARBON

Carbon fibre particles and PU materials infused into exterior boot construction reduce the weight of the boot, consequently increasing the functionality. Injected carbon active edge is strong and durable. It ensures better torsional stability, improved stance position and good grip for any heel or heel shape.

TPU

The TPU heel counter provides good grip, stable foothold in the heel, prevents heel movement, and adapts to various foot shapes and heel volumes.

SOLES

All Alpina XC boot soles are NNN compatible. Sole type and construction are chosen individually for each boot based on boot features and functional requirements.

ALPINA 2C SOLE

It is a two component sole made to match all binding systems. The surface is optimized to match the Alpina lasts which provides better stability and improves the stance position on skate and classic style boots.

NEW ALPINA SKATE SOLE

new stiff sole with 45° sole plugs has improved longitudinal and torsion stability. Higher heel, based on 3.0 skate model with additional flex inserts bring better power transmission to the skis.

NNN T4

TPU-made sole with good power transmission, softer, more comfortable flex and good walkability.

NNN BC

Sole with optimum support in difficult terrain; reliable walking thanks to non-slip profile.

VIBRAM 75MM

Standard Vibram 75 mm sole; provides excellent support in difficult terrain; non-slip profile with specially made rubber mixture.

NEW BC XPLORE

The sole has integrated SpringPin™ Technology which is located at the side of the shoe and removes the risk of snow packing. The sole is more flexible and stable. The new two-part anti-skid rubber sole gives traction when needed. mixture.

NON-PVC

No PVC materials were used during the production process and are not included in the boot's construction. In place, more environment-friendly materials have been introduced into production, making the boot warmer and increasing its breathability.

FLEX

The skate technique demands a hard flex sole, while the classic technique requires soft flex sole characteristics in the shoes metatarsal area. The Skate design also employs stiff flex component parts and materials, while both the Classic and Combi type shoe design employ specifically soft flex component parts and materials that deliver maximum power and control. Back Country employs a medium flex sole and components to deliver a more flexible, accommodating ski experience.

FIT

The design and shape of the internal 'soft' part of the shoe provides optimum grip, the narrow Race cut to the wider Comfort fit; the range is rounded out with the medium Dynamic fit that falls between the two extremes. All fit configurations take into consideration higher and lower variations in foot form.

OUTER SHOE

CUFFS

The skating technique requires more lateral ankle support for improved performance. So the boot has an externally fixed cuff, which provides rigidity and lateral stability to the ankle, to gain better responsiveness with optimal grip. Cuffs are made of carbon (which are extremely lightweight) or plastic. All are anatomically and ergonomically designed, employ a 'Velcro' power strap (some with EVA-padding) and are attached to the heel counter with rivets or screws.

FULL CARBON

The anatomic full carbon cuff is extremely light and delivers maximal stiffness and superior lateral responsiveness. EVA-padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

CARBON

A light anatomic carbon cuff delivering exceptional stiffness, lateral stability and responsiveness.

Equipped with a power strap for optimal ankle fit, superior comfort and adjustable ankle grip.

INJECTED CARBON

Carbon fibre particles and PU materials infused into exterior boot construction reduce the weight, consequently increasing the functionality and durability of the boot. Injected carbon cuffs take a firm hold of the ankle. They ensure better longitudinal stability and improved stance position while maintaining comfort.

TPU SKATE

Thermoplastic polyurethane provides good stiffness and lateral stability, while the power strap provides superior comfort and adjustable ankle grip.

TPU COMBI

The COMBI boot is designed for the classic technique. It has a softer flex sole, and is equipped with a cuff that provides less experienced skiers with more lateral support and stability to the ankle, and can be adjusted to the desired level of comfort.

GAITERS

One-piece seamless gaiters cover the shoe and lower leg completely. Gaiters are water-tight, with a water-tight zipper and elastic, and protect against cold, water, moisture and snow. And the boot instep is adaptable to different foot shapes.

PVC

NEOPRENE

PVC is strong and lightweight, soft and flexible, and highly durable, while neoprene maintains good flexibility over a wide temperature range and offers good insulation against both wet and cold.

4 DRY TEXTILE

4DRY stands for an innovative system made from bielastic PES textile material that allows the boot to breathe. It is laminated with a membrane where needed and designed with sublimation print for better abrasion. The material feels light on foot and is hydrophobic, whisking away the moisture, ensuring a dry and relaxed foot.

4DRY

ELASTIC INSERT

For gaiter adaptability to various lower leg shapes.

INNER SHOE

LACING

45°

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique.

ANATOMIC FOOTBED

Insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improves the thermal insulation of the shoe.

ALPITEX MEMBRANE

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. Even under extremely cold and high-humidity conditions it provides the foot with maximum thermal comfort.

CHALLENGE. EVERY DAY.

the weather

4DRY Breathable premium upper. For the first time in the world of racing, the circulation of air enables your foot to remain dry and keep your power kick at maximum. On the critical parts of the boot for the high performance, where breathable upper meets the carbon sole, a thin layer of special membrane is placed to prevent any possible water invading.

alpinasports.com

ELITE 3.0

ULTRA LIGHT CARBON CONSTRUCTION,
ULTRA HIGH PERFORMANCE

The world's lightest, most responsive ski boots are changing the way we ski – and win.

TORSIONAL STABILITY

ESK 3.0

The single-piece all-carbon anatomic 'Active Edge' skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ECL 3.0

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

FREE HEEL

Free Heel construction virtually eliminates heel stress, providing the skier maximum comfort.

ACTIVE EDGE

Active Edge consists of a special sandwich of inner and outer carbon textile layers combined around a rubber mid-layer for maximum chassis adaptability to various types of heels and heel shapes together with maximum power and total control.

CHALLENGE. EVERY DAY.

- 4DRY
- ANATOMIC FOOTBED
- NON PVC

A mere second can separate losers from champions. For that winning edge, we designed the new ELITE 3.0 SKATE. Lighter than its predecessors, it offers the best weight to functionality ratio of any boot currently on the market. Built firmly with full carbon cuffing and carbon active edge resting upon an anatomic footbed, this boot holds a tight grip on the foot, supporting it laterally and torsionally even on steeper terrain and through sharp turns.

ELITE 3.0 CLASSIC

This boot was made to bring out your best. We equipped it with full carbon cuffs, carbon active edge, 4DRY, and made the interior lining from non-PVC materials. It's also slimmer and lighter than ever with an even greater fit and reinforced torsional stability. Let your foot breathe as you reach for greatness!

CLASSIC AS

Ankle support (or AS) is a special design of the boot that provides greater lateral stability in the classic technique. For amateurs or those just starting to run this type of design will assist significantly when trying to overstep or turn sharp corners. They are equipped with a shell around the ankle for a tighter grip, working as a set of training wheels, preventing the skier from falling.

DOUBLE POLING DP

Double poling (or DP) is a special running technique where most of the work is done by arms. The competitors run by pulling their weight on ski poles, while the feet move ever so slightly in an up-and-down motion. The boot is specially designed to suit the needs of this technique. The sole is made from a compact hard and soft flex so that it bends where needed and ensures stability otherwise. For better posture and functionality the heel is slightly raised.

CHALLENGE. EVERY DAY.

They say greatness doesn't come lightly. Well, we put those words to the test and made the new ECL 2.0 JR. It's amazingly light. We injected its heel counter with carbon and fitted it with an anatomic footbed for that additional layer of comfort. It also comes with breathable 4DRY lining and thermal insulation – the impossible boot for your now possible results.

It's a good price-performance boot, ensuring some good skating at a desirable level of comfort.

SKIS

FEATURES

NANO HIGH BASE

The fastest base available. Nanosilicate particles embedded in a high-molecular sintered base result in higher durability and 6% increase in speed compared to leading sintered bases.

HM SINTERED GRAPHITE RACE BASE

All high-quality graphite racing bases have one thing in common, that they consist of ultra-high molecular polyethylene and have a high proportion of high-quality carbon (15-25%), which gives the base the black colour.

MULTI GRIP EMBOSSED

Provides perfect grip and control of the kick – especially in soft snow into the backcountry every day you ski.

DUAL GRIP BASE

The base of the ski features grip premium crown, a combination of double crown segments with single crown in the rear section of the ski for better gliding properties.

PE BASE

Developed to suit the needs of occasional skiers requiring little to no maintenance .

MULTIGRIP EMBOSSED BASE

A combination of various grip technologies for efficient power transfer and optimum glide.

SOLLTE GRIP BASE

Developed for better climbing and gliding in all snow conditions and ideally suited to backcountry skis.

SKIN TECH BASE

Made of 65% mohair and 35% nylon Alpina's Skin Tech base delivers the perfect balance of glide and grip in virtually all conditions. No special maintenance is required and skin segments are easily exchangeable.

STEEL EDGE

Steel edges significantly extend the ski life and greatly increase control in icy and ungroomed conditions especially when descending.

COMPETITION

As the name suggests, the Velocity Skate NIS Skis by Alpina are light and lively skate skis allowing you to set the pace and put you atop the podium. The resilient wood core construction provides a consistent and predictable performance with a smooth glide. The tapered sidecut makes these skis quick in set tracks and the reduced swing weight makes it easier to release the tip when you're transitioning between strides. A sintered P-Tex 2000 base gives an even efficient glide and is easy to maintain and holds wax well. Eonded NIS plates are designed to accept Rottefella NIS NNN bindings with easy slide-on installation. No drilling or tools required. Compatible with all NIS bindings and all NNN boots.

Walking in ski boots can be a rather slippery affair on some surfaces but the new GripWalk sole and binding system turns a conventional ski boot into a real performance miracle. This is achieved by the excellent grip, rounded high profile soles and the GripWalk binding components perfectly tailored to them.

NATURAL WALKING FEELING

It will make you doubt you are wearing ski boots. The rounded sole improves the rolling ability on every step you take.

NON-SLIP MATERIAL

Designed with superior materials and a pronounced profile, the ergonomic sole holds a perfect grip on any slippery surface.

INOVATIVE SYSTEM

The sole is compatible with most bindings on the market, without the need for height adjustment. While the toe and heel pads can be replaced at any time.

Strength, Versatility & Comfort

Height /Volume Adjustable Spoiler

A special element at the rear of the boot enables modification of the height / volume of the cuff.

Canting

The best skiers demand the perfect stance. Adjustable canting allows for the lateral alignment of the boot to be adapted to individual preferences, which enables the skier to develop perfect technique.

SKI/HIKE

Switching between ski- and walk-modes has never been simpler or easier – just insert the end of a ski pole, switch, and go.

Xframe

A rigid, lightweight structural frame connects the four main stress points and is reinforced on the most demanding axes, ensuring maximum strength and rigidity while reducing weight.

GRIP WALK

Designed with superior materials and a pronounced profile, the ergonomic sole holds a perfect grip on any slippery surface.

Easy entry system

Both the specially designed construction of the instep and the innovative Easy Entry system make boots simple to get on/off quickly and easily.

4DRY

4DRY liners provide breathability, drainage, ventilation and water resistance, keeping the foot warm, dry and comfortable.

Custom Fit

Alpina liners boast a number of key features that ensure a perfect balance between performance and comfort. Thermoformable foam ensures optimal fit in the sensitive ankle area, while the specially-designed foreliner adapts to the many variations in foot profiles.

Alpina's unique fully-integrated InTemp heating system keeps your feet comfortably warm at all times, but never overheated.

By swapping the specially designed Volume Control Plate between the left and the right boots you can adjust the boot volume for optimum fit.

ELITE MEN'S

INTEMP HEATING

fully integrated, fully energized

ALPINA'S UNIQUE FULLY-INTEGRATED **INTEMP** HEATING SYSTEM KEEPS YOUR FEET COMFORTABLY **WARM AT ALL TIMES**, BUT NEVER OVERHEATED.

CHARGING

The boot's charging input is small, discrete, easily accessed and weather-proofed. Smart and simple – no need to disassemble the boot to charge.

BATTERY

Batteries are fully integrated inside the boot, and also easily changeable.

SMART CONTROL

Ready to use with the simple push of a button, the system runs at full-power for initial warm-up, then automatically returns to normal power, so feet are optimally warmed but never overheated.

InTemp

We bid farewell to the cold days on the slope. The new InTemp heating technology ensures a warm embrace of the foot at a push of a button. Its easy access, smart charge, and discrete design will surely leave a comfortable and warm impression.

This ski boot is a recreational cruiser. It easily slides on foot, and with its relaxed fit offers plenty of breathing room. Anyone from a complete beginner to a pretty good skier who prefers to take it easy can find a happy home in the Alpina R4.0.

RENTAL SPECS

EAN code pocket for easy system referencing

Pre-curved ratchet buckle for fast and simple buckling

Durable PU material for shell and cuff

Tyrolia color-coding for easy match with skis and bindings (only DSS line)

Durable heel and toe plates for reliable long-term wear

Durable and anatomic footbed for more comfort and longer wear

Spring-loaded buckle for easy handling

Stronger, reinforced aluminum-alloy buckles

DISCOVERY XR

3M455*, 3M465
 size run **220,230...240*, 250,260... 320**
 skier type **Recreational**
 color **Black**
 shell **Polyether**
 cuff **Polyolefine**
 last **104**

We built this boot like a weapon. Its impenetrable outer shell will endure all the accidental bumps and bruises while the interior will take a snug hold of one's foot. It was made to be efficient. It practically slides on foot and the magnesium buckles snap without any extra effort. And you're good to go.

GRIP WALK SOLD SEPARATELY

DISCOVERY 4

3A881*, 3A951
 size run **220,230...240*, 250,260... 320**
 skier type **Recreational**
 color **Black**
 shell **Polyolefine**
 cuff **Polyolefine**
 last **104**

Built as stable as they come on an advanced X frame, the Discovery 4 holds no punches. It is made to withstand any impacts and last a long time. The price fighter among the rental offer will surely live up to its name.

Hard on the outside and soft on the inside, it is supported by an X frame chassis for incredible stability and better control on any terrain. We also fitted it with adjustable volume control to ensure a higher level of comfort. This immortal piece of hardware will last longer, no matter how many feet take it for a spin.
